RELATION PROBLEM SET

Problem Set 7.1

1	If a set a has n elements,	how many	relations are	there from	A to A?
---	------------------------------	----------	---------------	------------	---------

- 2. If A set has m elements and B has n elements. How many relations are there from A to B and vice-versa?
- 3. List the ordered pairs in the relation R from A = $\{0, 1, 2, 3, 4\}$ to B = $\{0, 1, 2, 3\}$ where $(a, b) \in R$ if and only if (i) a = b, (ii) a + b = 3, (iii) $a \times b$, (iv) $a \mid b$, (v) gcd(a, b) = 1, (vi) lcm(a, b) = 2.
- 4. Let $A = Z^+$, the positive integers, and R be the relation defined by a R b if and only if there exists a k in Z^+ so that $a = b^k$. Which of the following belong to R?
 - (a) (4, 16)
- (b) (1,3)
- (c) (4, 2)
- (d) (2,8)
- (e) (4, 4)
- (f) (2, 16)

5. Consider the relation R from X to Y all steep as a later of the state of the sta

$$X = \{1, 2, 3\}; Y = \{7, 8\} \text{ and } R = \{(1, 7), (2, 7), (1, 8), (3, 8)\}.$$
 Find

- (i) R^{-1} (the inverse of R)
- (ii) R' (complement of R).
- 6. The relation R on the set $\{1, 2, 3, 4, 5\}$ is defined by the rule $(x, y) \in R$ if 3 divides x y. Find
 - (i) the elements of R
- (ii) the elements of R⁻¹
- (iii) the domain of R

- (iv) the range of R
- (v) the domain of R^{-1}
- (vi) the range of R⁻¹
- 7. The relation R on the set $\{1, 2, 3, 4, 5\}$ defined by the rule $(x, y) \in R$ if $x + y \le 6$. Find
 - (i) the elements of R
- (ii) the elements of R^{-1}
- (iii) the domain of R

- (iv) the range of R
- (v) the domain of R^{-1}
- (vi) the range of R^{-1}
- 8. Let R be the relation $R = \{(a, b) : a \text{ divides } b\}$ on the set of positive integer. Find (i) R^{-1} (ii) R'.
- 9. Let $P = \{(1, 2), (2, 4), (3, 3)\}$ and $Q = \{(1, 3), (2, 4), (4, 2)\}$. Find $P \cup Q$, $P \cap Q$, dom. (P), dom. (Q), dom. (P \cup Q), ran (P), ran (Q) and ran (P \cap Q). Show that

dom.
$$(P \cup Q) = \text{dom. } (P) \cup \text{dom. } (Q)$$

$$ran(P \cap Q) \subseteq ran(P) \cap ran(Q)$$

10. Let $A = \{2, 4\}$ and $B = \{6, 8, 10\}$ and define binary relations R and S from A to B as follows:

for all
$$(x, y) \in A \times B$$
,

$$xRy \Leftrightarrow x/y$$

for all
$$(x, y) \in A \times B$$
,

$$xSy \Leftrightarrow y-4=x$$

State explicitly which ordered pairs are in A \times B, R, S, R \cup S and R \cap S.

- 11. Give example of a relation on the set of positive integers which is
 - (i) symmetric and reflexive but not transitive;
 - (ii) reflexive and transitive but not symmetric;
 - (iii) symmetric, transitive but not reflexive;
 - (iv) reflexive but neither symmetric nor transitive;
- (v) neither symmetric nor antisymmetric.

 12. Determine whether the relation R on the set of all integers is reflexive, symmetric, antisymmetric, and only if
 - (a) $x \neq y$
- (b) $xy \ge 1$
- (c) $x = y \pmod{7}$
- (d) x is a multiple of y

- (e) $x = y^2$
- (f) $x \ge y^2$
- (g) $x \le y + 1$ (h) |x + y| = 2
- (i) y-x+2 is a prime number
- (1) |y-x|+2 is a prime
- (i) y-x+2 is a prime number

 13. Below is the list of relations among people. For each of the following relations, state whether the relations are transitive.
 - (a) xRy stands for x is a child of y
 - (b) xRy stands for x is a spouse of y
 - (c) xRy stands for x is a wife of y
 - (d) xRy stands for x is a superior of y
 - (e) xRy stands for x and y have the same parents. To xinters on all and sindly will
- 14. Give an example of a relation that is both symmetric and antisymmetric.
- 15. Prove that the relation R defined on the set of positive integers $(x, y) \in R$ if x y is divisible by 5 is y = 15. equivalence relation.
- 16. Which of the relations defined in the set of real numbers are equivalence relation?
 - (i) aRb if and only if |a| = |b| A most order the another years work as proved a said a very
 - (ii) aRb if and only if $a \ge b$
- (iii) aRb if and only if $|a| \ge |b|$ and $|a| \ge |b|$ and $|a| \ge |a|$ and $|a| \ge |a|$ if and only if $|a| \ge |b|$ and $|a| \ge |a|$ if and only if $|a| \ge |b|$ and $|a| \ge |a|$ if and only if $|a| \ge |b|$ and $|a| \ge |a|$ if and only if $|a| \ge |b|$ and $|a| \ge |a|$ if and only if $|a| \ge |b|$ and $|a| \ge |a|$ if and only if $|a| \ge |b|$ and $|a| \ge |a|$ if an analysis of |a| if $|a| \ge |a|$ if $|a| \ge |$ 17. Show that the relation 'is congruent modulo 4 to' on the set of integers {0, 1, 2,, 10} is an equivalent relation. the positive interests, and R be inviole so defini
- 18. Determine which of the following are equivalence relations and / or partial ordering relations for the
 - (a) $A = \{\text{lines in the plane}\}; xRy \text{ if and only if } x \text{ is parallel to } y.$
 - (b) $A = \{\text{the set of rural numbers}\}; xRy \text{ if and only if } |x-y| \le 7.$
- 19. (a) Let $x = \{1, 2, 3, 4\}$. If for $x, y \in X$.

 $R = \{(x, y) : x - y \text{ is an integral non-zero multiple of 2}\}$

 $S = \{(x, y) : x - y \text{ is an integral non-zero multiple of 3}\}.$

(b) If $x = \{1, 2, 3,\}$ what is $R \cap S$ for R and S as defined in (a).

20. Let $A = \{1, 2, 3, 6\}$. If for $x, y \in A$.

$$R = \{(x, y) : x \le y\}$$

$$S = \{(x, y) : x \text{ divides } y\}$$

Write R and S as sets and find $R \cap S$.

- 21. For a set X with n elements, find how many relations on X there are which are
 - (a) symmetric

(b) antisymmetric

(c) reflexive

(d) irreflexive

(e) reflexive and symmetric

- (f) reflexive but not symmetric
- (g) symmetric but not reflexive
- (h) neither reflexive nor irreflexive
- 22. Show that the relation R on a set A is reflexive if and only if the inverse relation R^{-1} is reflexive.
- 23. Show that the relation R on the set of all triangles in the plane defined by

 $R = \{(a, b) : triangle \ a \text{ is similar to triangle } b\}$ is an equivalence relation.

279

RELATION

- 24. Show that the relation R over the set of all straight lines in the plane defined by 'is perpendicular to' is sýmmetric but neither reflexive nor transitive.
- Show that the relation 'less than or equal to' on the set of integers is a partial order.
- 25. Let $A = \{\text{all words in the English language}\}$. If $x, y \in A$, define x = y if and only if x and y have the same number of letters, show that the relation is an equivalence relation and find the equivalence class of the word student.
- 27. Let $A = \{a, b, c, d\}$, and consider the relation

$$R = \{(a, a), (a, b), (a, c), (a, d), (b, b), (b, d), (c, c), (c, d), (d, d)\}$$
a partial ordering

Show that R is a partial ordering.

28. If R be a relation in the set of integers Z defined by

$$R = \{(x, y) : x \in \mathbb{Z}, y \in \mathbb{Z}, (x - y) \text{ is multiple of 3} \}$$

Show that it is an equivalence relation. What is the equivalence class of 0? How many equivalence classes are there?

29. Let A be the set of non-zero integers and let R be the relation on A × A defined by

$$(a, b) R (c, d) \Leftrightarrow ad = bc$$

- (a) Show that R is an equivalence relation
- (b) Find [(1, 2)], i.e., equivalence class of (1, 2).
- 30. A relation R is defined on $A = Z^+ \times Z^+$ by $(a, b) R (c, d) \Leftrightarrow a + b = b + c$.
 - (a) Show that R is an equivalence relation.
 - (b) Find [(2, 5)], i.e., the equivalence class of (2, 5).
 - (c) Interpreting A as the co-ordinate plane, give a geometrical description of the partition of A into equivalence classes.
- 31. Define ρ on the set $R \times R$ of ordered pairs of real numbers as follows. For all (a, b), $(c, d) \in R \times R$.

$$(a, b) \rho (c, d) \Leftrightarrow a = c$$

- (a) Show that ρ is an equivalence relation.
- (b) Describe the distinct equivalence class of ρ . Interpreting R × R as the co-ordinate place, give a geometrical description of the equivalence classes.
- 32. Let $A = \{0, 1, 2, 3, 4\}$. Show that the relation $R = \{(0, 0), (0, 4), (1, 1), (1, 3), (2, 2), (3, 1), (3, 3), ($ (4, 0), (4, 4) is an equivalence relation. Find the distinct equivalence classes of R.
- 33. Let R be the relation of congruence modulo 3. Which of the following equivalence classes are equal?

- 34. Let R and S be relations on a set A
 - (a) if R is reflexive, so is R⁻¹.
 - (b) if R and S are reflexive, then so are $R \cap S$ and $R \cup S$.
 - (c) if R is symmetric, so are R⁻¹ and R'.
 - (d) if R and S are symmetric, so are $R \cap S$ and $R \cup S$.
- 35. If R and S be two relations from A to B. Show that

(i)
$$(R \cap S)^{-1} = R^{-1} \cap S^{-1}$$

(ii)
$$(R \cup S)^{-1} = R^{-1} \cup S^{-1}$$

- 36. Let $A = \{1, 2, 3\}$ and $B = \{1, 2, 3, 4\}$. Let R and S be two relations from A to B defined by $R = \{1, 2, 3\}$ and $B = \{1, 2, 3, 4\}$. Let R and S be two relations from A to B defined by $R = \{1, 2, 3\}$ and $B = \{1, 2, 3, 4\}$. $\{(1, 1), (2, 2), (3, 3)\}\$ and $S = \{(1, 1), (1, 2), (1, 3), (1, 4)\}.$ Find (i) $R \cup S$ (ii) $R \cap S$ (iii) R^{-1} (iv) S⁻¹ and show that $(R \cap S)^{-1} = R^{-1} \cap S^{-1}$.
- 37. Let $A = \{a, b, c, d\}$ and $R = \{(a, b), (a, a), (b, a), (b, b), (c, c), (d, d), (d, e), (d, e), (e, d), (e, e)\}$ and $S = \{(a, a), (b, b), (c, c), (d, d), (e, e), (a, c), (c, d), (d, e), (e, d)\}$ be the equivalence relations on A. Determine the partitions corresponding to followings (i) R^{-1} (ii) $R \cap S$.

mhi.

ANSWERS 7.1

5

2. $2^{m \times n}$

3. (i)
$$\{(0,0),(1,1),(2,2),(3,3)\}$$

(ii) $\{(0,3),(1,2),(2,1),(3,0)\}$

(iii)
$$\{(1,0),(2,0),(3,0),(4,0),(2,1),(3,1),(3,2),(4,1),(4,2),(4,3)\}$$
